...

1 Problem Statement

[You should check your problem statement with the problem statement checklist. —SS] [You can change the section headings, as long as you include the required information. —SS]

1.1 Problem

1.2 Inputs and Outputs

[Characterize the problem in terms of “high level” inputs and outputs. Use abstraction so that you can avoid details. —SS]

1.3 Stakeholders

1.4 Environment

[Hardware and software —SS]

2 Goals

2.1 Cater to Users' Interests

Allow for a wide variety of different categories and subcategories that a user may choose, in order that the system may provide a list of relevant recommendations.

2.2 Find Common Interests

Find content that meets some common criteria of all users in a group.

2.3 API Data Collection

Will obtain all necessary information on shows and movies through API services.

2.4 Group Compromise

Should there be no overlapping interests between two or more users in a group, the system will either provide show or movie recommendations that are of a similar genre to what was selected (an "inbetween" solution), use a tie-breaking mechanism (if one set of categories have more popularity in the group), or select options from the non-overlapping categories.

2.5 Web App Compatibility

Will work on multiple web browsers, such as Google Chrome, Firefox, etc. on desktop devices.

3 Stretch Goals

3.1 Mobile Web Usability

System could be optimized for easier use on web browsers for mobile devices.

3.2 Mobile App

An app may be made available on the Apple and Android stores for download.
